Our barometer is a way to gauge market movements and whether security instruments are fairly priced. The theory is based on the logic that excessive negativity tends to drive down the prices, and too much positivity tends to have the opposite effect.

Our barometer is a compilation of different indicators that measure some aspect of ETF and commodities behavior. They are comprised of market momentum, price strength, and stock price breadth. It tracks how much these individual indicators deviate from their average. The weightage of each factor is subject to past behavior and market conditions.
